

Lower the Cost of Food

Provide Montgomery County farmers with smart farming robots, at cost, to eliminate the environmental impact of industrial farming. Put robotic greenhouses in every neighborhood.

Peter has already installed hydroponics systems in 3 MCPS high school, on his dime. Here's one at the Rock Terrace special needs school.

Electric AI controlled robots, supplied at cost, eliminate pesticide, synthetic fertilizer use and GHG emissions. Peter will provide a free license to Montgomery County farmers.

I'll provide a free license to my land care robot technology to the County and MCPS to provide safe natural grass playing surfaces for our kids.
